MONITOR series
PIONEER

| YZ 3521

The family of Pioneer monitors designed for Gaming offers a wide choice of features to satisfy every need and budget.

35 inches with curved panel WFHD 21:9 144 Hz, 1ms access time for an extraordinary immersive viewing experience with multimedia and games.

FEATURES

Large 35" VA display with WFHD resolution

Big size, perfect for viewing WFHD resolution at its best. The IPS panel's VA technology offers brilliance and high contrast in addition to a viewing angle of 178 degrees.

A new Viewing Experience

The Curved panel offers the sensation of being at the center of the action, for an immersive viewing experience with a high degree of realism and thanks to the 21:9 ratio it's even more enveloping.

144Hz Class Monitor

The 144Hz refresh rate, and an access time of 1ms (OD), ensure videos and games without dragging effects, even in the most dynamic scenes. For users with AMD graphics hardware there is also the predisposition for Freesync technology.

Gamers-proof prevention of sight disorder

The image quality and the LBL filter that reduces the emission of blue light, minimize the feeling of tiredness and eye fatigue. The high energy of blue-violet light in the narrow band 415-455nm is particularly harmful to the eyes, particularly for the crystalline lens and the retina. An important feature for products intended for intensive use by gamers.

Pivot and height adjustable: ergonomic and versatile

The monitor is adjustable in height, to create an ergonomic and comfortable position. The "Pivot" rotation of 90° allows the optimal viewing of Portrait vertical movies, a format more and more in vogue due to the habit of shooting videos with Smartphone and Tablet.
