1.2 Accessories

The following accessories are provided together with each of your purchasing this product. If you find something missing, please contact the seller for it.

· Tablet PC
· USB Cable
· Adaptor
· User Manual
· Earphone
· SD Card

1.3 Installation of SIM card and Memory Card

SIM card

SIM Card contains details of your telephone numbers, storage status and network service.

Installation of SIM card

Open the protection cover for TF card and SIM card, and insert cards as the following pictures show. Please make sure the card pin face the right direction.

Removal of SIM card

Note: Please turn off your computer before removing the SIM card.

Open the protection cover, press the card lightly, then it will spring back.

Memory card

A SD card is needed to store the picture, music, video and the other data.

Installation of memory card

1. Open the protection cover for TF card and SIM card;
2. Make the card pin face the right direction and insert it into the slot;
3. Insert the card till it clicks into the position.

Removal of memory card

1. Please make sure the memory card has been disconnected from your computer before removing it.

Press > > **Setting** > **SD card & device storage** > **Unmount**

SD card;

2. Open the protection cover of TF card and SIM card;
3. Press the card lightly, and then it will spring back from the slot.

1.4 Charging and Earphone

Charging

Please do as the picture tells when the battery needs charging.
Connect the power cord to your computer, and then plug the adaptor into the socket.

When the battery is being charged, icon appears on the status bar.

When the battery is fully charged, it will turn into icon .

Earphone

When you need to use the earphone for chatting or listening music, please insert the earphone into its jack, and then icon will appear on the status bar.

Note:

· When you are using the earphone, your hearing ability will probably be restricted from the external sound.

· Please do not use it when it will do ill to your health.

. Please do not turn it up to the maximum when you are using the earphone because it will do bad to your hearing ability.

1.5 Turning On/Off

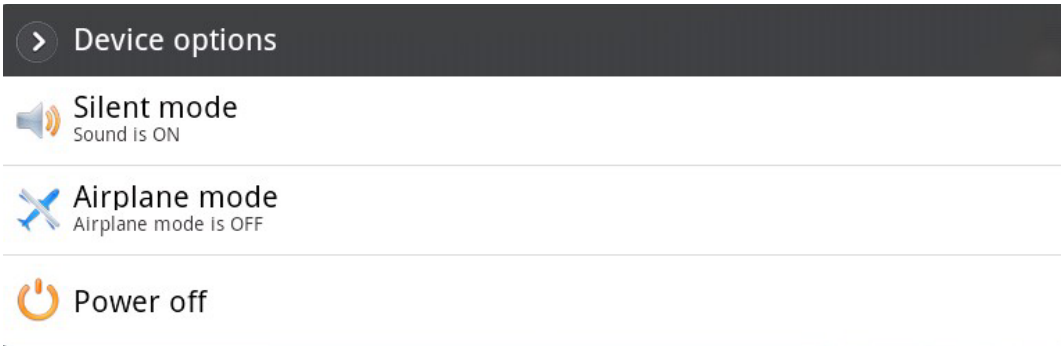
Your computer can be turned on after the SIM card is inserted and the battery is fully charged.

Turning on

A short press of the power button can turn on your computer, then vibration occurs and the button is lightened. It will take some time for your computer to be initialized. Please wait for a while.

Turning off

Press power button to turn off your computer, a “Device options” will pop up on the screen, then press **Power off**, and press **OK**.



Dormant state

Give a short press to the power button to make your computer enter into dormant state. This way can save battery energy and prolong its working life. You can also set the time for the screen to lock automatically. To wake up your computer, please press any of the following keys: Power button, Home screen button, Menu button, etc.

Chapter Two Basic Knowledge about Your Computer

2.1 Home Screen

You can view and use by the operation of the Home screen various functions of your computer as well as read and search other information.

There are five Home screens for your computer. You can slide left and right with one of your fingers to switchover them, and can go back to the Home screen interface from any interface by pressing the Home screen button. All the application programs put on the Home screen can be seen here, and you can open it by pressing any icon of them.

Status bar and indicator

There are many status indicators on the right top of the screen. If there are missed calls or new messages, etc., the relative indicators will come up to the screen to remind you. Use one of your fingers to slide down from the status bar to view all the indicating information, and then press any one of them to view details. If you want to close the status bar, just press .

Icon	Description	Icon	Description
	SIM Card not inserted		Signal Indicator
	3G Network		GSM Network
	EDGE		Flight Mode
	Battery Being Charged		Low Battery Capacity.
	Battery Fully Charged		Mute Mode
	Vibration Mode		Alarm
	GPS turned on		Wi-Fi Connected
	USB Connected		Bluetooth

Reminder: You can press the status bar to view the date.

Note: The indicators may be different from the real icons of your computer due to the update of the system.

Shortcut

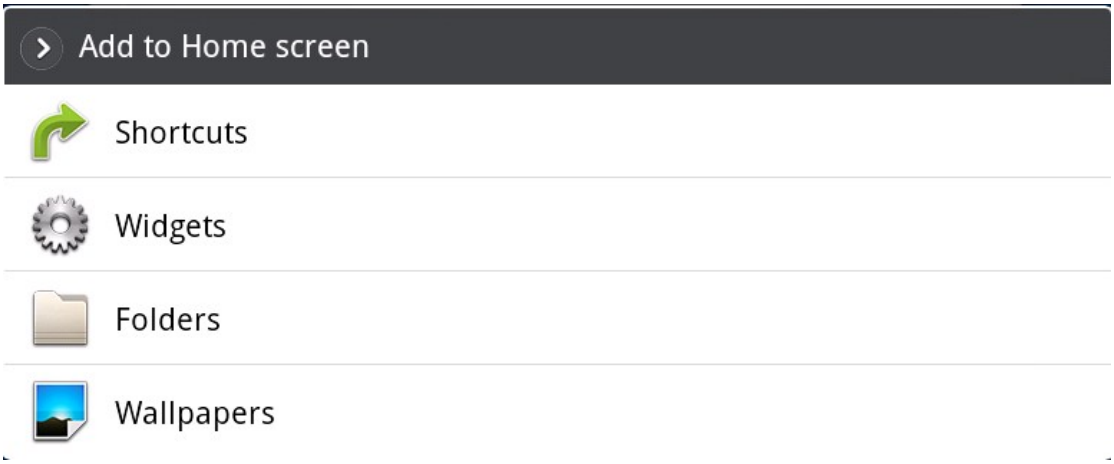
It is allowed to add shortcut icons on the Home screen.

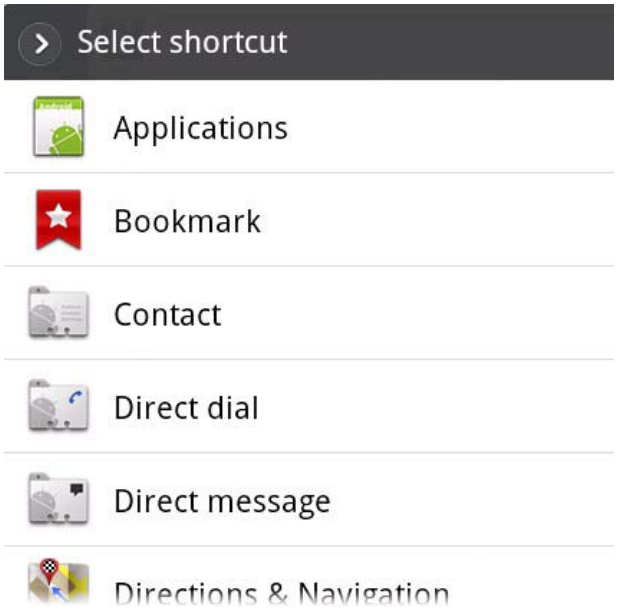
There are the following three ways to add it.

· Click icon on the Home screen, press and drag the icon you need to the Home screen.

· Give a long press on the blank area of the Home screen, next **Add to Home screen** will pop up to the screen, then choose **Shortcuts**.

· Press from the Home screen, then choose **Add** > **Shortcuts** to add shortcut icon.



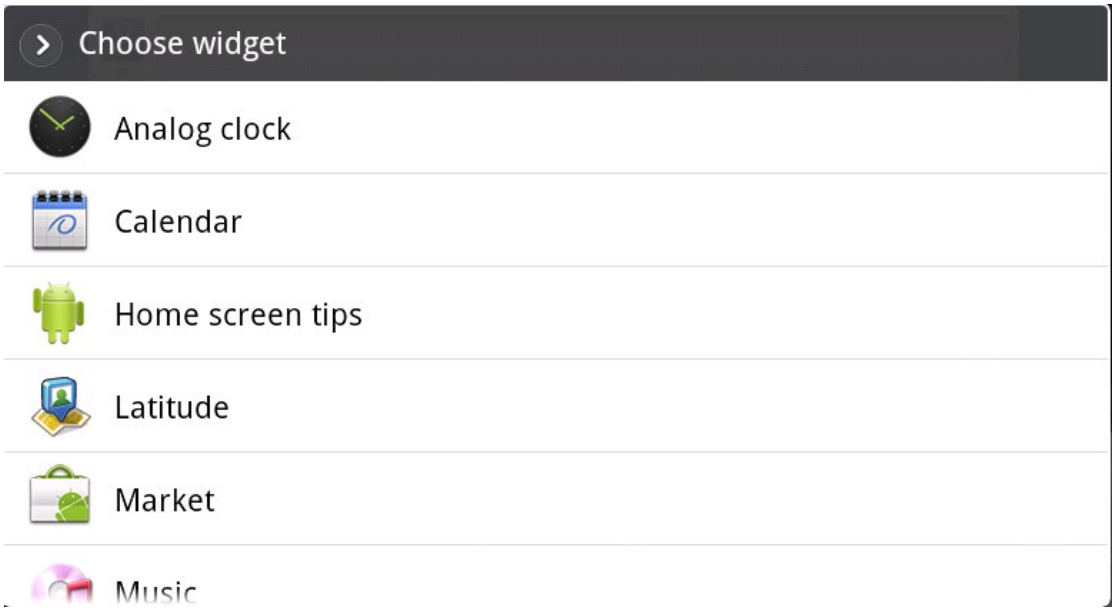


Widgets

You can add Analog clock, Music, calendar, etc. to the Home screen.

Give a long press to the blank area of the Home screen till **Add to Home screen** pops up, and then choose **Widgets**. You can also add Widgets by pressing > **Add** > **Widgets**.

Power Control can also be added to the Home screen for you to control the energy usage of the battery to prolong the battery life.



Wallpaper

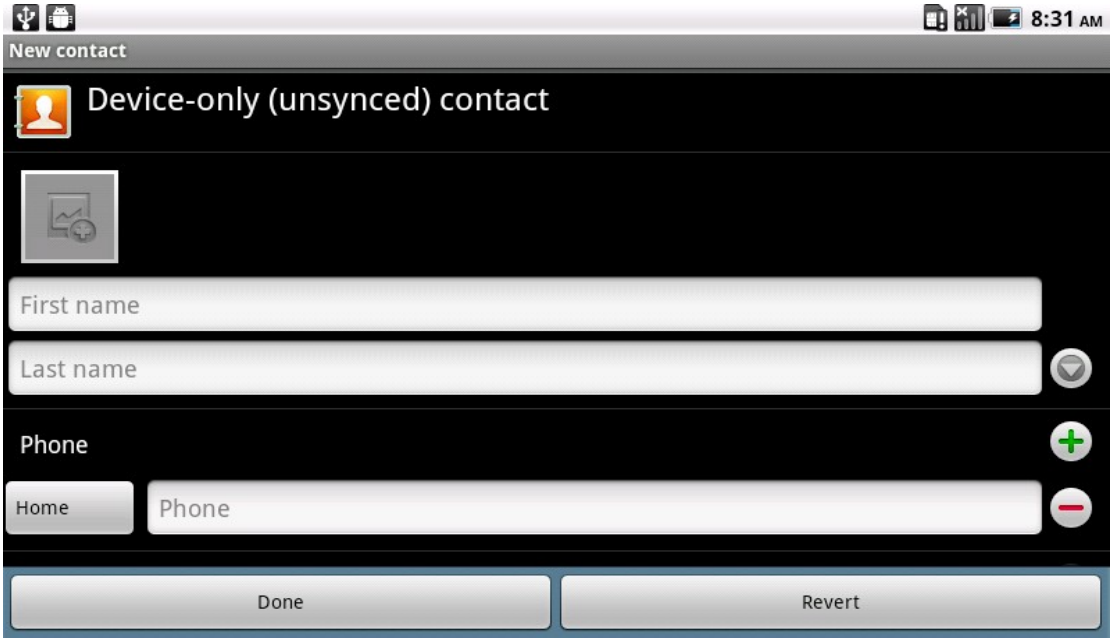
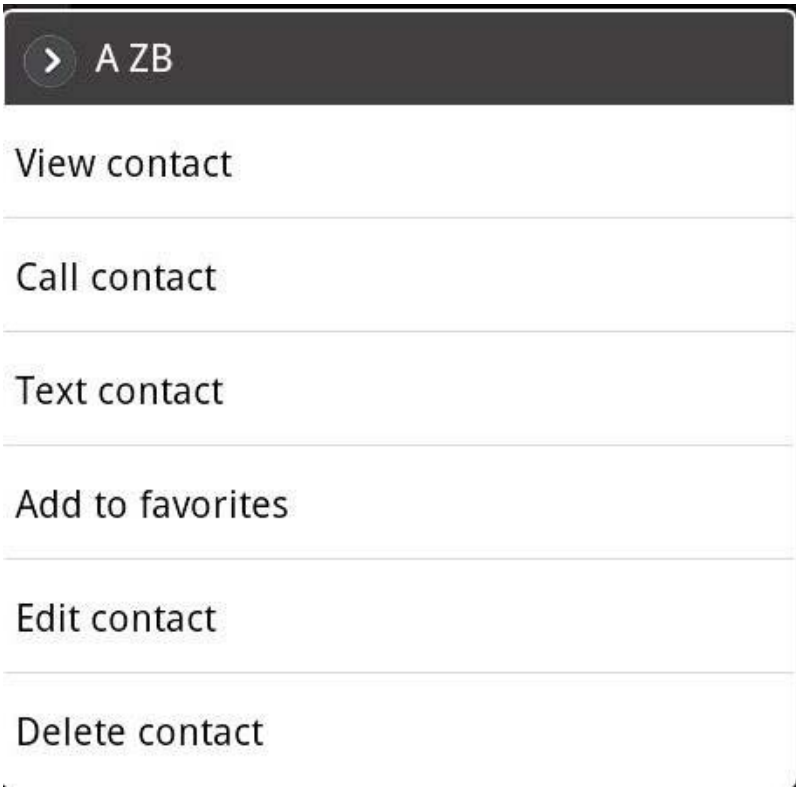
2. Press **Done** after your inputting the required information to save it.



Edit / Delete a contact

To find this function, please

1. Press **Contacts**, and then open the contact list.
2. Give a long press to the contact to be edited, and then choose **Edit contact**, **Delete contact**, etc.



Backup contacts

You can output the contact details to the SD card to backup.

To find this function, please

1. Press **Contacts**, and open the contact list.
2. Press > **Import / Export**
3. Press **Export to SD card**.

Press **OK** later on to backup the details to SD card.

Import contacts

Import from SIM card

To find this function, please

1. Press **Contacts**, and open the contact list.
2. Press > **Import / Export**.
3. Choose **Import from SIM card**.

All the contacts from the SIM card will be listed here, and press the one

you need to input, then press input to import it to your computer. You can also press, and choose input all to import all the contacts from SIM card to your computer.

Import from SD card

To find this function, please

1. Press **Contacts**, and open the contact list.
2. Press > **Import / Export**.
3. Choose **Import from SD card**

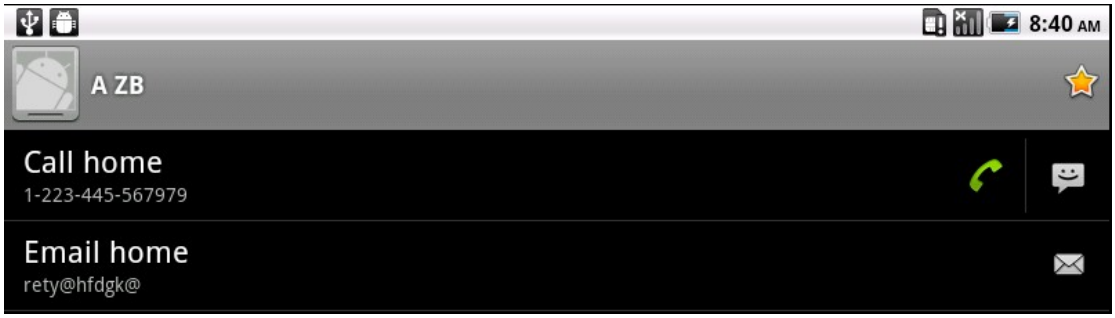
All the contacts will be imported from SD card to your computer.

Add contacts to Favorites

You can add some contacts to **Favorites** for easy search and use.

To find this function, please press > >

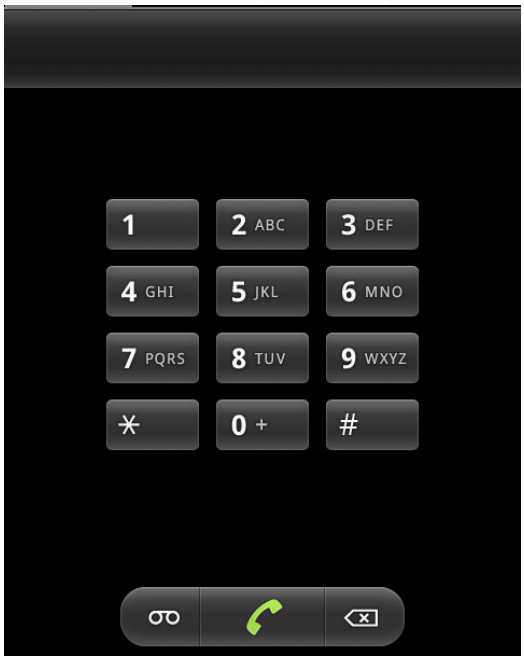
Choose a contact from the contact list and give it a long press, then press **Add to favorites.** Now this contact has been added to **Favorites**, and you can see there is a golden star marked on the right top of the box after your giving a short press to view details.



Chapter Three Using Your Computer

3.1 Calling Guide

Make a phone call



1. Press to open the dialpad.

2. Press number keys to enter the phone number.

3. Press the calling key to make a phone call.

4. Press hang-up key to end a call.

Note:

1. Press the right one of the three buttons at the bottom to delete the number entered.

2. During calling, you can press Home screen button or return button to hide the calling interface to operate the other applications. To return to the calling interface, please press > Back.

Answer a phone call

When somebody is calling you, your computer will remind you in the way you pre-set. You can move the answering key rightward to answer the call or move the hang-up key leftward to hang up.

Speaker

You can choose this function while driving to keep safer.

Use speaker, earphone, or Bluetooth to answer the phone.

Mute during calling

During calling, you can use mute function to avoid the other side hearing your voice.

Press **Mute** to open or close mute function.

Teleconference

You can make a teleconference with many parties.

1. Press calling key to open the dialpad.

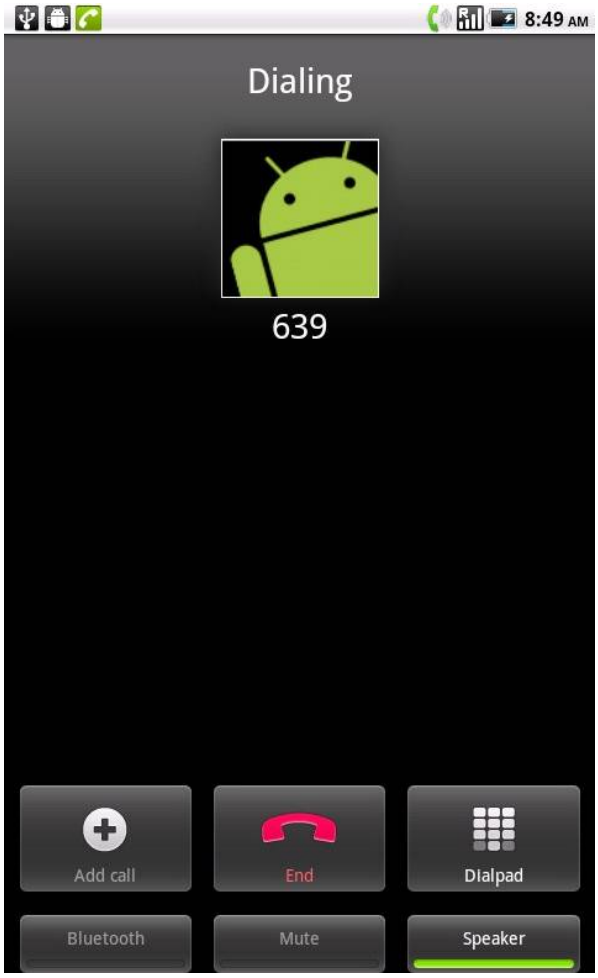
2. Press the numbers to enter the phone number of the first party.

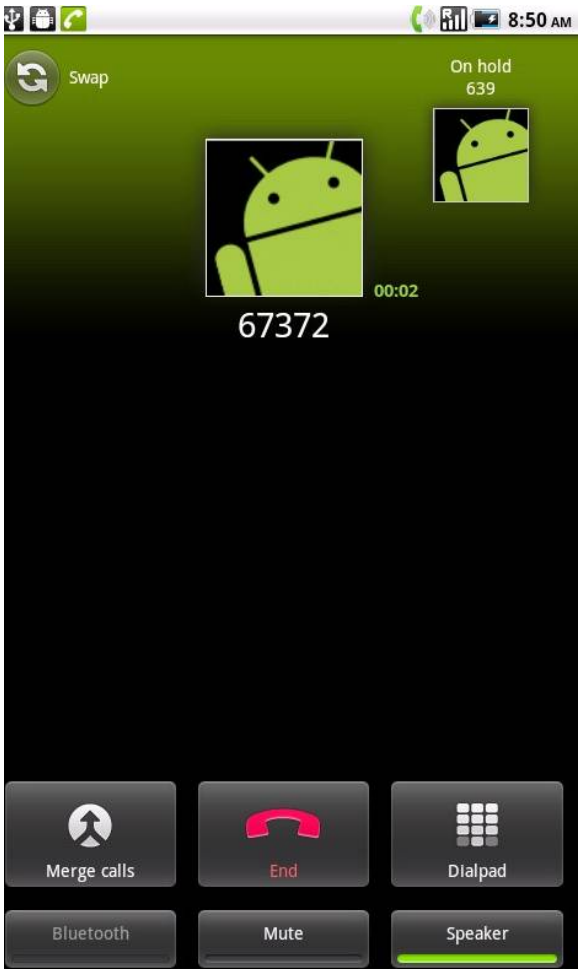
3. Press to make a call.

4. After receiving the answer, press **Add call**.

5. Click the numbers to enter the phone number of the next party, and press .

6. After the call is connected, press **Merge calls** to connect all parties.

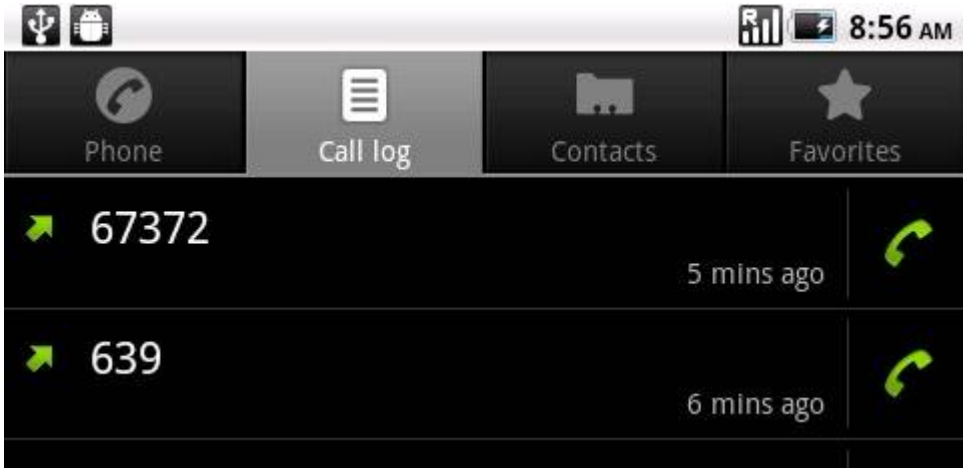




Call log

You can get the information of Received calls, Missed calls, Dialed calls, etc. from **Call log**.

To find this function, please press > > > **Call log**



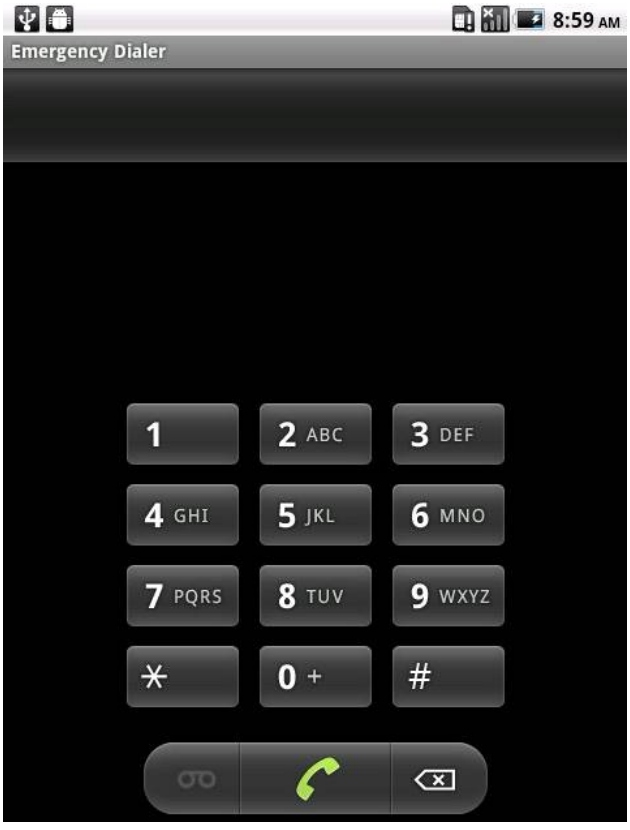
Emergency call

Your network service provider provides one or more than one emergency call which you can dial even with your computer locked.

1. Press > > to open the dialpad. (If your computer is locked, press **Emergency call**.)

2. Press numbers to enter the phone number.

3. Press to call.



Note:

1. In different countries, the emergency numbers are different, so the

emergency number set to your computer may not work in the other countries. Sometimes the emergency call can not get through due to the influence of the network, environment, etc.

2. For dialing emergency call, the calling function of your computer must be enabled.

3.2 Sending a Message

You can send or receive text messages or MMS.

Edit a new message

To find this function, please press > > **Messaging** > **New message**

1. Press **To** to input the receiver.

When you receive a new message, the reminder will pops up onto the status bar.

To find this function, please press > > **Messaging**

Press the related message, then

1. Press **Type to compose**.

2. Input the content, and press **Send** to send this message.

Send a MMS

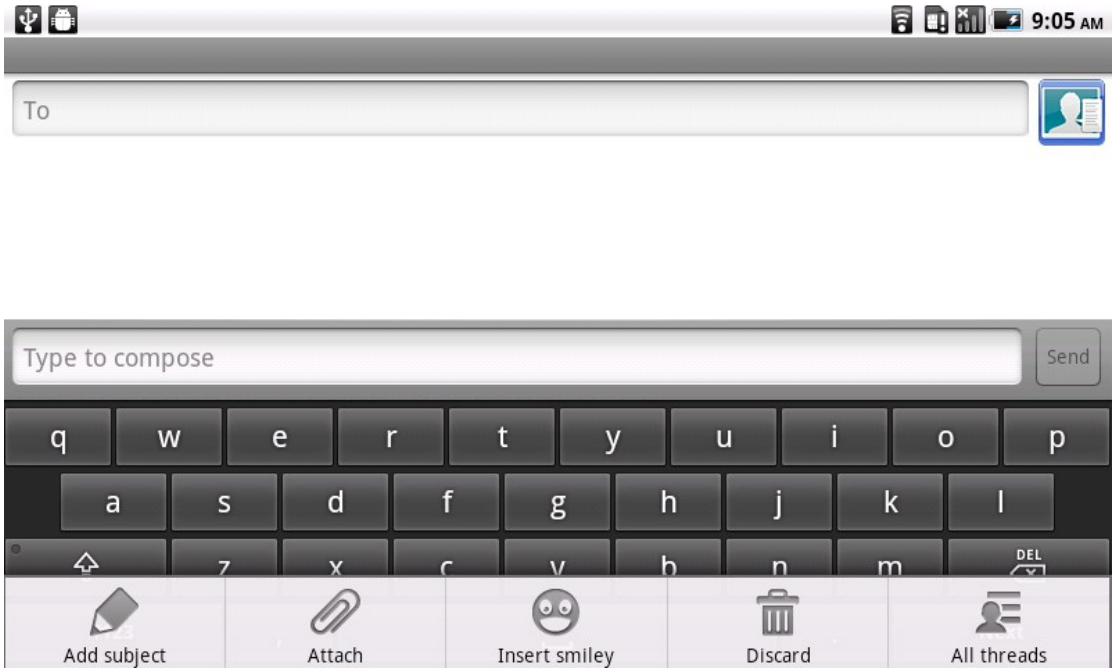
To find this function, please press > > **Messaging** > **New message**

1. Press **To** to input the contact information you need to send this message to or you can press to add contacts from the contact list.

2. Press > **Add subject** to add the subject for this message.

3. Press **Type to compose** to edit the content, and then press **Send** to send it.

Note: You can press to **insert smiley**, **Attach**, etc.



Chapter Four About Emails

4.1 Sign in With Google Account

Signing in with Google account can synchronize your computer with the server in terms of Gmail, calendar and contact list. Further more, you have to sign in with Google account in order to synchronize Google applications, e.g. Google Talk, Android Market, etc.

The first time you start your computer, the operation options will pops up onto the interface for you to sign in with Google account. Or press **Google Account** > **Yes** > **Next** from the interface of account setting, and press **Sign in** to enter your account and password, and then press **Sign in**.

After signing in, all the emails, contact list and calendar of your Google account will synchronize automatically to your computer.

Note: Please press **Create** if you do not have a Google account.

Get the password of your Google account

If you forget the password of your Google account, you can get it back through the following steps.

1. Open the browser of your computer, and go to http://google.com/accounts.
2. Press **can't access your account** on the right part of the web page.
3. Input the email address and press **Submit**.
4. Press related code to continue.
5. Press **Continue** to get your password by following the subsequent process suggested.

Set for synchronization

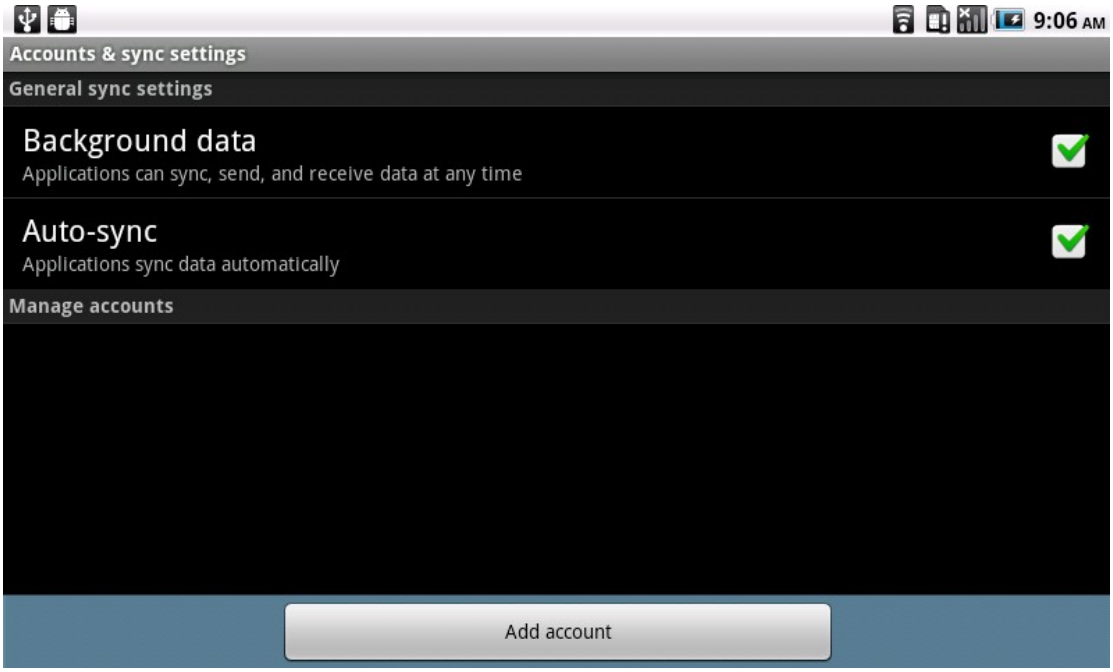
You can synchronize the contact information, etc. of your computer to the web by binding Google account. This can help to update the Google applications.

To find this function, please

1. Press > > **Settings** > **Accounts & sync**
2. Press **Background data**

Note: For saving energy of your battery, please do not press **Background data**.

3. Press **Add account** to set a new account.



4.2 Gmail

Gmail can be used after you successfully set a Google account.

Compose a new mail

To find this function, please press > > **Gmail** > > **Compose**

Input the email address of the receiver and the content, then press **Send** to send it.

Note: You can get more operation options by press menu button, e.g. **Attach**, **Add Cc/Bcc**, etc.

Other operations

· Press **menu button** > **Search** to search emails;

· You can set the way of reminding you when receiving a new mail, such as set a special tone for a new email. To find this function, please press **menu button** > **More** > **Settings** > **Email notifications**, and choose the one you need.

· If you want to mark the email subject, please give a long press to the email and choose **Change labels**.

4.3 Email

You can use this function to send and receive emails.

Note:

1. You must at first set the email box before use it to send or receive emails.
2. All the emails are sent or received with the internet connected. For detailed setting parameters, please refer to your network service provider.

Setting for the email

To find this function, please press > > **Email**

After entering the email address and password, please press **Next** to set your account, name, signature, etc., then press **Done** to end setting.

You can also set your email account in the following way.

1. Enter the email address and password;
2. Press **Manual setup** and choose account type;
3. Set the incoming server, etc;
4. Set the outgoing server, etc;
5. Press **Done** to end setting.

Send an Email

You can send an email to one or more than one person. Before sending, you can add email address by manual input or from the address list.

To find this function, please press > > **Email**

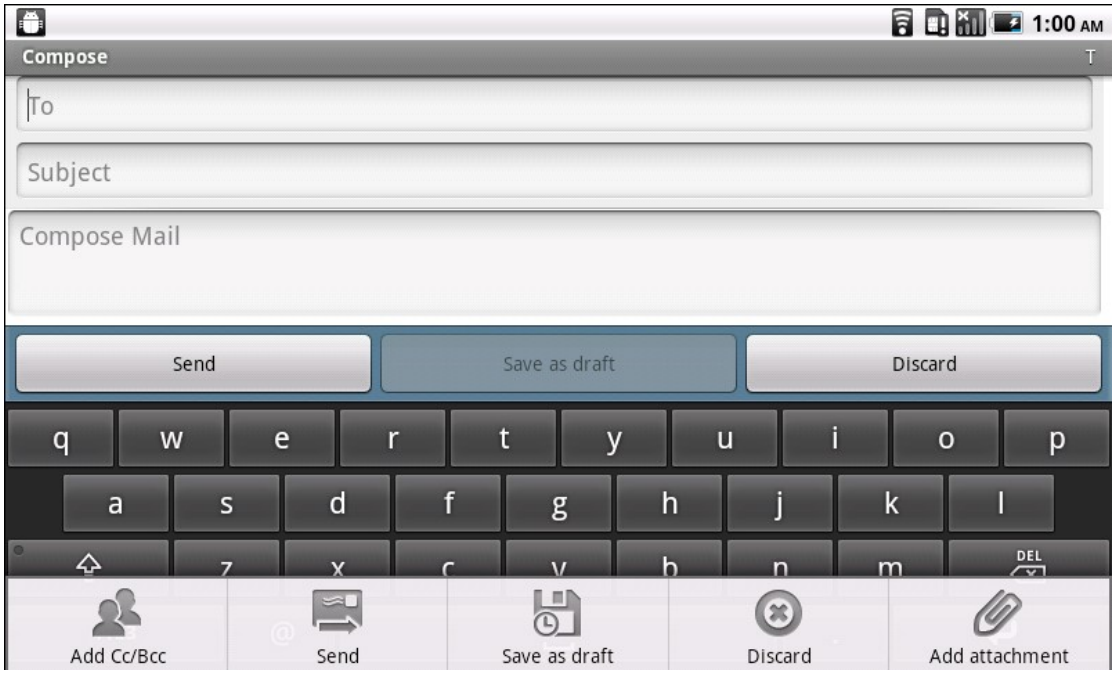
1. Press , and **Compose** to open the interface for text editing.

2. Press **To** to input the email address of the receiver. Press > **Add Cc/Bcc** to add CC or Bcc address if it is necessary.

3. Press **Subject** to enter the subject, and press **Compose Mail** to input email text.

Press and **Add attachment** to insert the needed document, etc.

4. Press **Send** to deliver your email.



Receiving an Email

All the emails will be stored in the server of the network service provider before you download it to your computer.

To find this function, please press > > **Email**

1. Press and press **Refresh**.

2. Your computer will connect the server to download emails. Emails downloaded will be stored in the inbox.

· Press any one of the emails to read.

· While reading, press and **Forward** to send this email to the other users, or press **Reply** to edit and send to the sender.

Chapter Five About Browser

5.1 Connecting to the Internet

Wi-Fi

You can use Wi-Fi to surf the internet and download.

Turn on/off Wi-Fi

To find this function, please press > **Settings** > **Wireless & networks** > **Wi-Fi**

Tick to turn it on and tick again to turn it off.

Note: To prolong the battery life and save energy, please close Wi-Fi if you do use it.

Scan and connect Wi-Fi

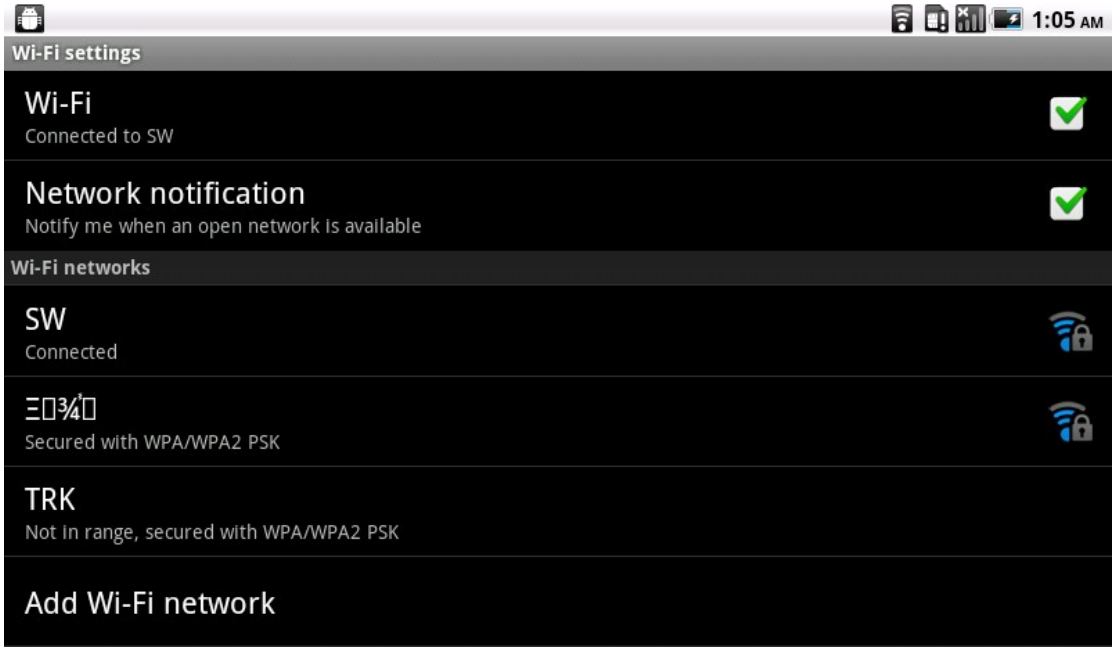
1. Press > **Settings** > **Wireless & networks** > **Wi-Fi settings**
2. Press **Wi-Fi** to scan. If Wi-Fi is turned on, your computer will list below all the network searched.

Note: Press > **Advanced** to view all the details about your Wi-Fi.

3. Press the network you want to connect.
4. Enter the password of the network if it is required, and press **Connect**.

When the network is connected, icon will show up on the status bar.

Note: If Wi-Fi is turned on and you are in the area the network covers, your computer will connect automatically to the network you connected before.



5.2 Browser

You can use browser to access the web page and internet-based applications. Please contact your network service provider for the right to access if it is required.

Note: The type of network depends on the network service provider. Different types cause different network charges. For charge details, please contact the network service provider.

To find this function, please press > > **Browser**

Note: You can go to the web page by pressing Browser resting on the edge of the Home screen.

Open links of a web page

You can press the link to open it.

Give a long press to the link to choose to **Open in new window** or add it as **Bookmark link**. You can also enter in the address field the web address you want to go to, and press to open it.

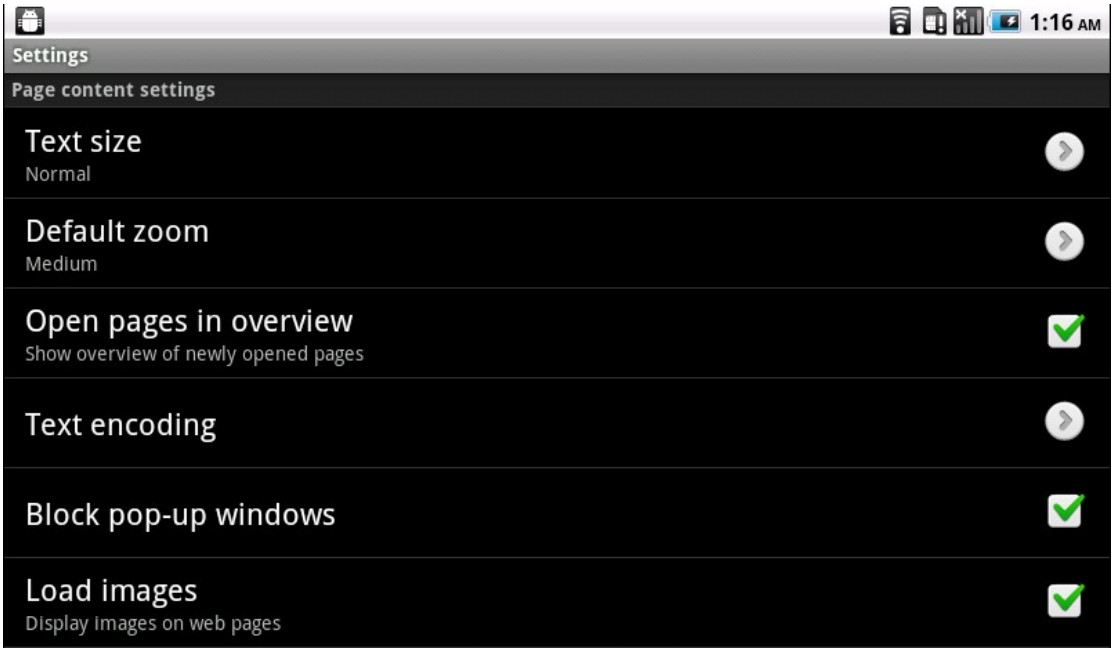
Zoom web pages

You can zoom the web page by double-click it, and give a quick view to the web page by pressing and holding to drag the screen in vertical direction.

Set for Browser

You can set the browser for customization.

To find this function, please press > > **Browser** > > **More** > **Settings**



Chapter Six About Bluetooth

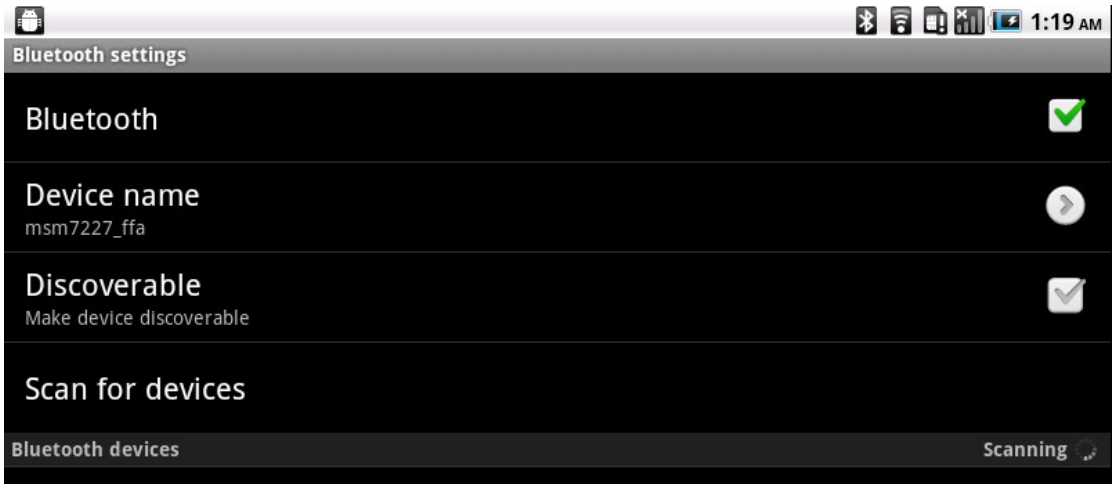
6.1 Connecting Bluetooth

Your computer supports application of Bluetooth, and you can connect your computer to Bluetooth-supporting devices for data switching, e.g. earphones, mobile phones, laptops, etc.

Turn on/off

To find this function, please press > **Settings** > **Wireless & networks** > **Bluetooth**

Tick to turn it on and tick again to turn it off.



Connect to a new device

1. Make sure the Bluetooth of this new device is turned on and its name is on the screen.

2. Press > **Settings** > **Wireless & networks** > **Bluetooth settings** with your computer.

3. Turn on the Bluetooth of your computer and press **Scan for devices**.

4. All the Bluetooth names searched are listed below, and press the one you need to pair.

5. Type PIN code (e.g.0000), and then press **OK** to pair.

If Bluetooth is turned on, icon will show up on the status bar.

Note:

1. Different Bluetooth devices may have different features and functions, please read related user manuals for details.

2. Different Bluetooth devices may cause different ways of connecting;

this user manual is only for your reference.

Disconnect from a device

In the name list, choose and give a long press to the one you want to disconnect, the press **Unpair**.

Chapter Seven About Multimedia

7.1 Music

Play music

You can use music application to have a good enjoyment.

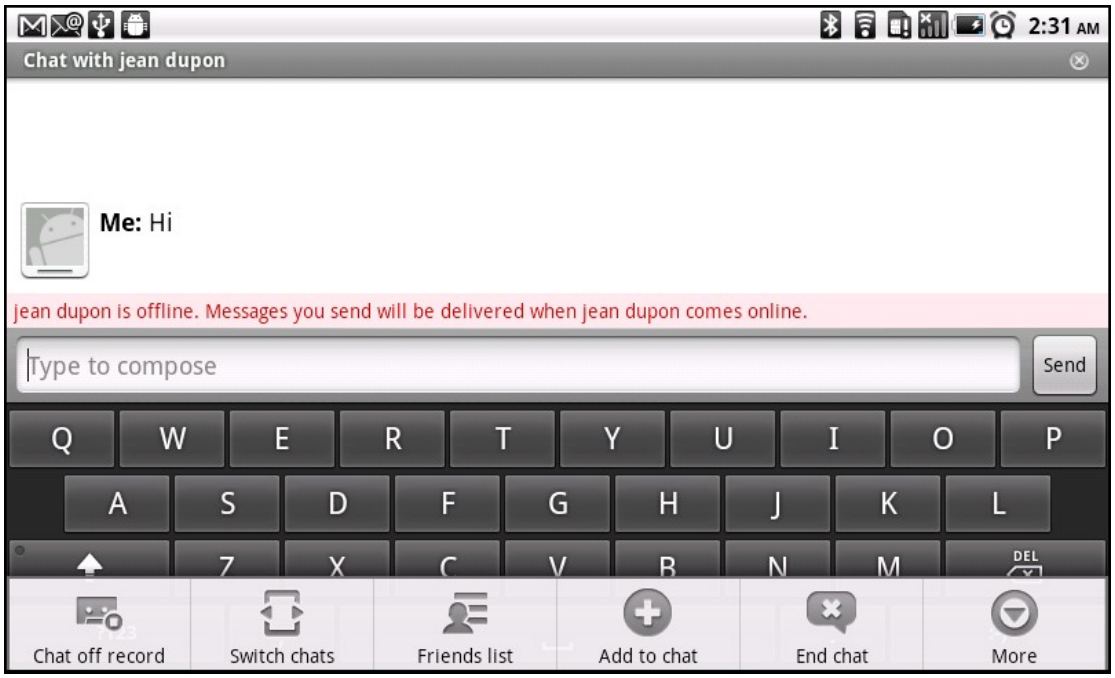
Note: If you want to insert **Emoticons**, please press menu button, and choose **Insert smiley**, then click any one of them to insert it to the text.

3. Choose **Send** to send your message.

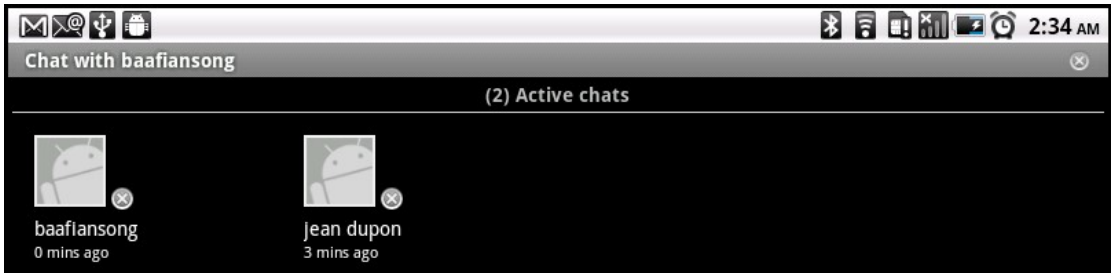


Switchover

If you are chatting with more than one friend, you can switchover in the following way.

· Press menu button from the chatting interface, and choose **Switch chats**.

· Choose the friend you want to chat with.



End chatting

Do as one of the following ways:

· From the contact list, give a long press to the friend you are chatting with, and press **End chat**.

· From chatting interface, press menu button, and press **End chat** to end chatting.

Managing contacts

All the friends are sorted based on the online status, e.g. Available, busy, invisible, etc. The contacts of a certain online status are listed based on letters of the alphabet.

The default setting is that the friends you frequently contacted are listed in the visible list. If you want to view all the friends, please press menu button and choose **All friends**.

Note: Press menu button and choose **Most popular** to switchover.

Block friend

You can block a friend not to let him send message to you. The blocked friend will also disappear from the visible contact list.

1. Choose one that you want to block from the contact list.

Note: If you can not find the friend, please press menu button and choose **All friends**.

2. Give a long press to the friend and choose **Block friend**. Then this friend will disappear from the contact list and will appear on the blocked list.

Note: To unblock the friend, please press the menu button from the contact list, and choose **More**, then press **Blocked**. Choose the one you want to unblock from the blocked contact list and press **OK**.

Always show friend

You can set the friend to always show to make it visible all the time in the **Most popular** list.

1. Give a long press to any one from the contact list to get a menu.

Note: If you can not find the contact, please press menu button and choose **All friends**.

2. Press **Always show friend**

Note : To remove the contact from **Always show friend**, please give a

long press to the contact and choose **Auto show friend**.

Most popular

1. Give a long press to any one from the contact list to get a menu.

Note: If you can not find the friend, please press menu button and choose **All friends**.

2. Press **Always show friend**

Note: If you want to remove the contact from **Most popular**, please give a long press to the contact and choose **Hide friend**. If this friend has been set to Always show, it will also be removed from Always show by pressing **Hide friend**.

Mobile indicator

You can check the icon on the right of the contact name to see what device the contact is using to talk with you.

It means that the contact is using Android mobile phone to talk with you.

If there is no icon on the right, it means that the contact logged in from a PC last time.

You can also choose whether to show **Mobile indicator** or not.

1. Press menu button from the contact list, and choose **Settings**.

2. Tick **Mobile indicator**, then press return button. The icon and your name will appear in the contact list of your friends, so your friend can see what device you are using to talk with him.

Set for IM notifications

Set for notification after receiving a new message

You can set your computer to ringtone, Vibrate or showing on the status bar after receiving a new message.

1. Press menu button from the contact list, and choose **Settings**.
2. To do as one or all of the followings.

· Tick **IM notifications** to make icon show up on the status bar after receiving a new message.

· Tick **Select ringtone** to make it remind you by ringing after receiving a new message. Pleas choose Mute if you do not want it to ring.

· Tick **Vibrate** if you want it remind you by vibration after a new message.

Automatically sign in

You can sign in Google Talk automatically every time you turn on your computer.

1. Press menu button from contact list, and choose **Settings**.
2. Tick **Automatically sign in**.
3. Press return button to save settings.

Sign out Google Talk

When you want to quit Google Talk, please press menu button from contact list and choose **sign out**.

9.8 Maps

Maps can let you know where you are now, check traffic information, and receive the exact direction of the destination. By using the search function it provides, you can find the satellite image of the place you want to visit, and can also view it in some other ways.

Note: Before using map function, you have to get 3G/GPRS service or get Wi-Fi network.

· Not all the countries or cities can be found in the map.

Identify your location

You have to indentify your location to open the map and search your location or some other places.

To find this function, please press > > **Settings** > **Location & security**

Tick **Use wireless networks**, **Use GPS satellites**, or both.

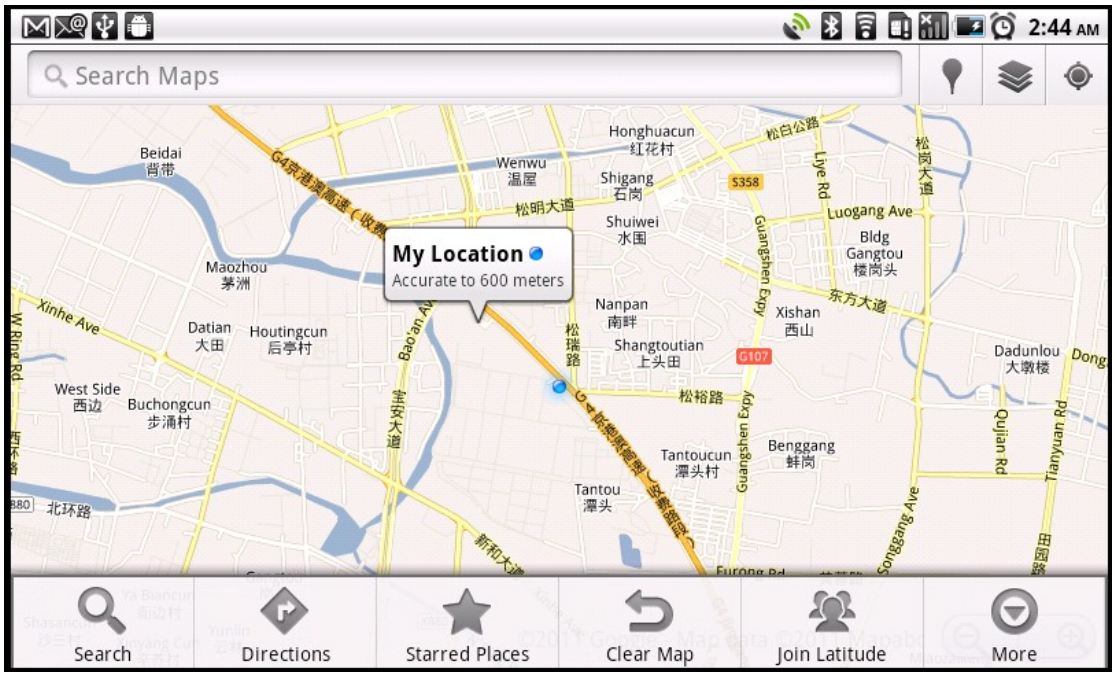
Note: By ticking **Use GPS satellites**, you can search a place by street layer, but it is only allowed to use in a fine and clear day and will use more energy of your battery.

Open the map

To find this function, please press > >

Find where I am now.

Press icon on the right top of the map, then your place will flash blue.



Search for the other places

1. Press menu button on the map interface, and press **Search**.

2. Input the place you want to search for. You can choose to input an address, a city, a building name, etc.

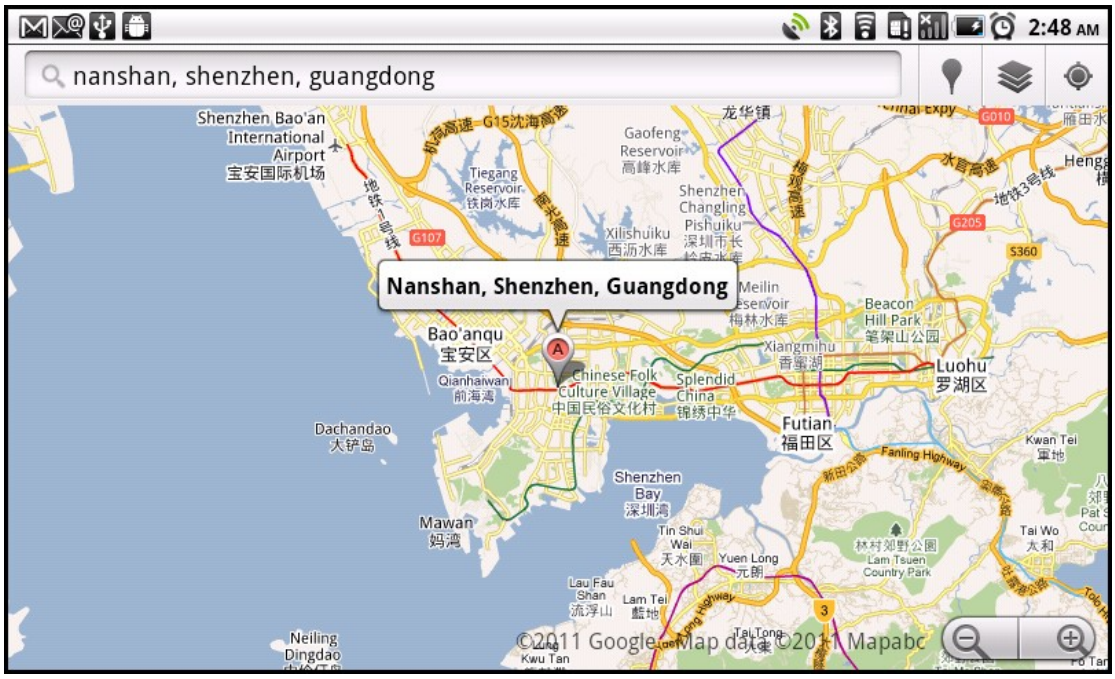
Input a place you want to search for.

Press to search.

Note: When you are entering an address, the addresses you searched or visited will come to the screen. By your pressing any one of them, the map will show you where it is.

3. Press to see all the search results.

4. Press text field on the interface to view details of the place you searched.



View the map

You can use the following skills to view the map.

Zooming

Press to magnify, and press to minify.

Navigation

You can go to the other area by using one of your fingers to slide the map in the direction you want.

Change map pattern

You can view the map by different patterns. Press on the right top to choose from **Traffic**, **Satellite**, **Terrain**, **Latitude**, etc. **More Layers** includes **My Maps**, **Wikipedia**, **and Transit Lines**.

· **Terrain**: It is default setting. It not only shows the map, but also shows streets, rivers, lakes, parks, etc.

· **Satellite**: It uses the same data as Google Earth, but the satellite image is not the real time. Google Earth will choose the best image, but most of the images have a history of from one to three years.

· **Traffic** (limited to a certain area): Traffic information of the real time will be marked with different colors. Different color means different moving speed.

Get a route

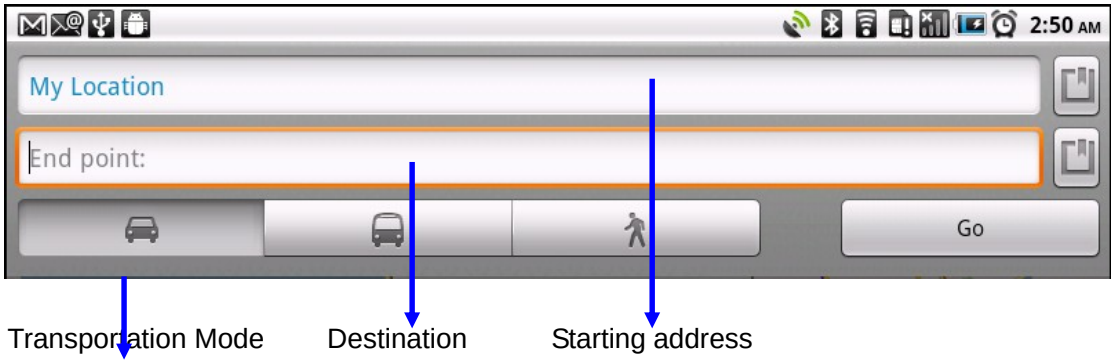
You can use the map to get a detailed route to your destination.

1. Press menu button from any of the map pattern, and choose **Directions**.

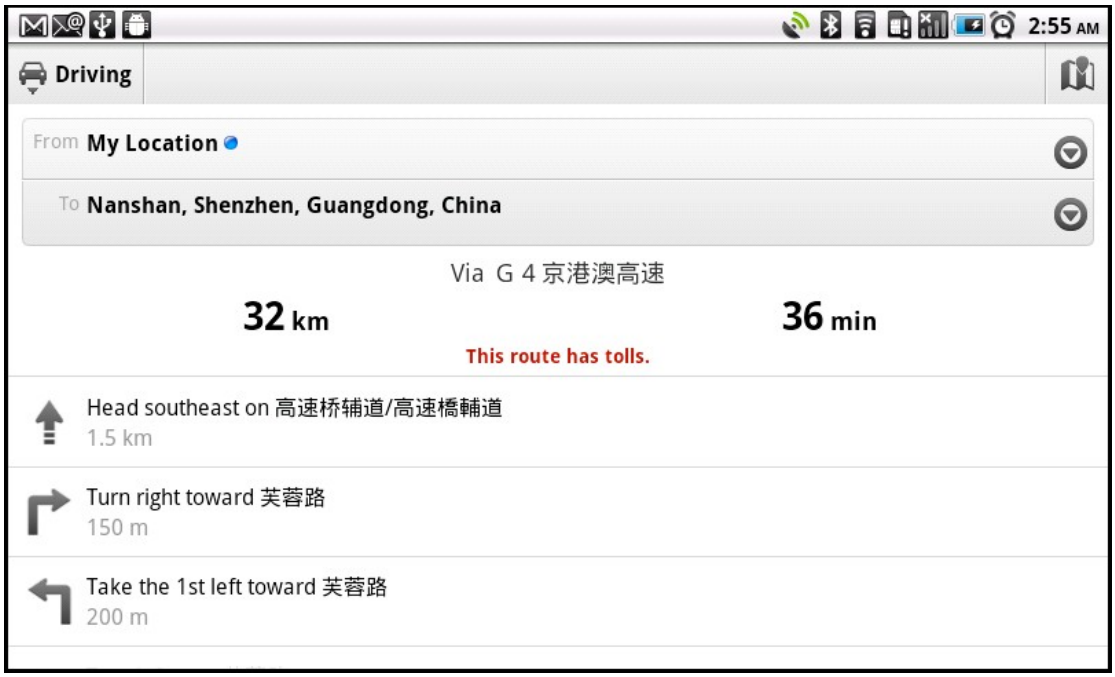
2. Input the starting address in the first field and the destination in the second field. Your place will be default set in the first field.

You can also press to open the address list to choose the place you need.

4. Choose the transportation mode you need.



5. Press **Go** to get a detailed route list, and press the icon on the right top of the screen to get a route on the map.



After using this map, please press menu button and choose **Clear Map** to reset a route. The destination you searched will be saved in the records automatically.

To find this function, please press > **Settings** > **Display** > **Brightness**

Move the scroll bar to adjust the brightness, and press **OK**.

Set screen timeout

To find this function, please press > **Settings** > **Display** > **Screen timeout**

Adjust the delay before the screen automatically turns off.

10.6 Privacy

Factory data reset

Note: You can set your computer to the factory data.

This operation will clean away the following data from your computer.

· Your account

· Customization to the system and applications in your computer and related history.

· All the applications downloaded.

This operation will not clean away the following data.

· System softwares and bound applications.

· Files and documents stored in SD card, e.g. music, photos, etc.

To find this function, please press > **Settings** > **Privacy** > **Factory data reset**

10.7 Protecting Your Computer

Protect SIM card with PIN

You can set a PIN (personal identification code) to protect your SIM card from embezzlement.

Set PIN from your SIM card

Press > > **Settings** > **Location & security** > **Set up SIM/RUIM card lock**, and tick **Lock SIM/RUIM card**.

Use the keyboard to input PIN of your SIM card, and press **OK**. If you want to change PIN, please press **Change SIM/RUIM PIN**.

Note: You do not have to input PIN for emergency call.

Unlock SIM card

If you input wrong PIN for three times, your SIM card will become “PUK Locked”, then you have to input PUK to reget access to this SIM card. PUK and PIN will be provided together with SIM card.

Press **Emergency call**, and input the following words:

**05*[PUK code]*[New PIN code]*[New PIN code]#

E.g. If your PUK is 888888 and you want to reset your PIN to 7777, please press emergency call and input **05*888888*7777*7777#

Protect your computer with screen lock

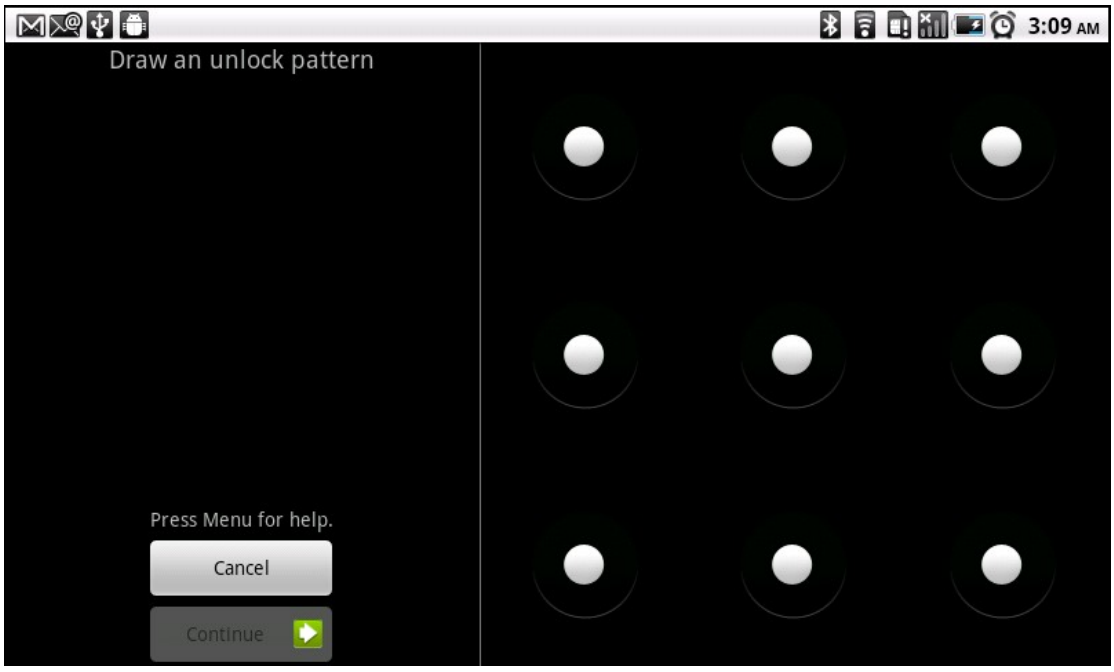
You can lock the screen and require the user to give a correct password each time when your computer is powered on or waken up from the sleep mode.

Lock the screen

Press the power button to lock the screen to avoid unwanted touch to the screen when your computer is put in a bag, haversack, pocket, etc.

Draw and use the unlock pattern

You can set unlock pattern to protect your computer. When it is set, you have to draw a correct unlock pattern on the screen to unlock your computer.



1. Press > , and choose **Settings**.
2. Press **Location & security** > **Set up screen lock** > **Pattern**.
3. Read carefully the description on the screen and press **Next**.
4. View the example pattern, and press **Next**.
5. Draw your own personal unlock pattern in vertical, horizontal, or

diagonal direction to link at least four points. After setting, please move your finger away from the touch screen.

Note: You have to use your finger to slide on the screen to draw unlock pattern. No pattern will be drawn by pressing the point.

6. Your computer will record the unlock pattern you have drawn, please press **Continue**.

7. Draw the unlock pattern again to make sure, and then press **Confirm**.

Note: If you do not want the unlock patter to appear on the screen when you are unlocking, please untick **Use visible pattern**.

Note: If you want to change unlock pattern, please press Home screen button > menu button , and choose **Settings** > **Location & security** > **Change screen lock**.

If you fail to give a correct unlock pattern for five times, it will remind you to wait for 30 seconds for the next try. If you forget unlock pattern, please press Forget unlock pattern. Then it will remind you to log in with your Google account and password, and will ask you to make a new unlock pattern before entering the main interface.
